Surgery Westcliff 01. Consultation

Vet / Nurse Ian Daly

### Item

1.00 x Consultation - Small Pet Initial

1.00 x Loxicom Oral Susp (dogs)

**Clinical Notes:** id - in for review. Been treated at another vets for tx of wettail. Had D+ in June, responded well to baytril. Recurrence 10 days ago, some D++. Started on baytril and rabbit probiotic then. Still damp around back end. Saw vets again 3 days ago, prescribed lactulose, but no F+ passes recently. Has not been eating much at all, not drinking by self, owner been giving water via syringe. Hunched appearance at times, not moving round as normal.

On exam, alert and responsive, moving around eye. Good eye position, skin elastic, not dehydrated. Stained around tail, some alopecia. BW 0.157kg.

Possibly constipated, nothing passed after lactulose however. Owners concerned regarding possible obstruction. Considering Poppy BAR, moving around - feel that if neoplasia, intussception, etc - would likely have had passed away. Owner consent to swab using lubricant around anus to check for any prolapse or blockage.

small amount on swab, loose material. Nothing else produced. When returned to consult room, noted one dried pellet. Passed straight after or was already there?

In case consitpation, advised pain relief, advised hold off nsuids, keep on baytril. Reassess by wednesday if no better, owner aware if appetite not improving or not passing F+, can ultimately be life threatening.
